

# we've got the power

## lighting

Cine Power is renowned for its DC Lighting systems. We lead the field with our unique approach to Lighting Batteries and Ballasts, with DC Ballasts ranging from 125 Watt all the way up to a whopping 800 Watt DC Ballast. Our batteries are also more than able to power the current high power L.E.D. and Sky Panels.

With rugged, solid construction, Cine Power lighting batteries will give you extremely reliable performance for years and years and years... even in the Rental Business.

## camera

Our Camera batteries are especially tailored for the exceptional demands of the HD Camera environment. They offer high power, long life, reliability, performance and flexibility with compact and rugged design features to withstand the challenging conditions often encountered during production.

## grip

The Grip Department is highly a specialised part of the Industry which we support with our Robust and Powerful batteries. Some of the Grip requirements need a lot of power to run their equipment and we are more than able to supply it to them.

Magnum 60 and Crane Power are some of our leading Grip batteries and which have more than proven themselves in the field.

## v-mount

Cine Power has recently introduced a range of V-mount batteries which are "Safe to Fly". They are constructed with NiMH battery cells and they can be transported without any restrictions.

The dependability of Cine Power batteries is based on their rugged construction and the unique charger technology pioneered by Elemér L.A. Nyíry.

Proprietary intelligent microprocessor controlled charging extends battery service life. There is no need to recell batteries on a regular basis.

# NO HALF MEASURES!

**FULL light output from battery power.  
For all 48V led lampheads and fixtures,  
including Orbiter, Vortex 8 and Skypanel**

The new Cine Power DC Driver safely and efficiently runs all the leading led panels at 100% output on battery power.

As an example the run time for 1 X 30V 15 Ah Powerbank is around an hour at 100% Skypanel output, longer if dimmed. For longer run time connect up 2 X Powerbanks. Battery inputs can be "hot swapped" without interrupting light output!

Two protected battery inputs.

One 48V DC output.

**Crane Power** has been designed to run the Chapman Hydrascope crane and is capable of supplying 100 Amps continuously.

They can also be run in parallel through a dedicated heavy duty Commoning Block, which shows real time Voltage and Current.

The batteries also been designed to fit in the standard Chapman crane base.

Auto fast charge super "smart" microprocessor controlled. The dependability of Cine Power batteries is based on their rugged construction and the unique charger technology pioneered by Elemér L.A. Nyíry.

Proprietary intelligent microprocessor controlled charging extends battery service life. There is no need to recell batteries on a regular basis.

The Mega 30 Extra Battery is especially tailored for the 400/800 Watt DC Ballast

It is a powerful robust single battery block designed to provide 30Ah at 30 Volts.

This setup will run an 800Watt MSR light for almost an hour. With rugged, solid construction, Mega 30 Extra will give you extremely reliable performance for years and years and years.... even in the Rental Business.
